## Single Phase Variable Transformers

Variable Transformers include a full range of single and three phase models. Standard models include input voltages from 120VAC to 480VAC. Frequencies to 2000 Hz can be accommodated. Special units for voltages up to 1000 VAC are available. Below are links to detail specifications for standard units. They are categorized by input voltage, output voltage and number of phases. If you do not find the transformer that meets your application requirements, please contact us with your detailed specifications.
